## **Prompt.ly**

*Software Engineer*

9.2014 - 3.2015

*prompt.ly*

Implemented Prompt.ly's first browser app, which included the development of unit and E2E test suites, API design, OAuth integration, and phone, tablet and desktop responsiveness.

Developed features for Prompt.ly's phonegap app, which included the writing of accompanying test suites and UI and UX design and engineering.

## **MHBO.com**

*Freelance Front End Engineer*

7.2014 - 8.2014

*mhbo.com*

Implemented mockups as ERB for a Rails codebase.

## **Infield Design**

*Front End Engineer*

6.2013 - 5.2014

*infielddesign.com*

Contributed to internal Javascript framework built on top of Backbone.js for single-page e-commerce checkouts, including development of form validation, defining a convention for module interactions, and refactoring and modularizing the project's only JS file.

Scoped and developed a data visualization application as a CMS extension through multiple phases, including the implementation of screenshot-taking capabilities and asynchronous content editing through the front end.

Developed single-page application that displays the test scores of over 1000 schools. Features included filtering, sorting, pagination, and modals for viewing details of any given school.

Implemented mobile-first responsive design patterns in CMS and e-commerce sites. Developed cross-browser-compatible styling, layout and UI with IE 7+ support.

## **Intag Newspaper Archive**

*Freelance Software Engineer*

10.2013

*intagnewspaper.org*

Designed and implemented front end, built on top of Flask.

Wrote Javascript hash routing to filter content based on its meta data.

## **Frameworks and Libraries**

Angular | D3 | jQuery | Node | Q | Jasmine | PhantomJS | Socket.io | Trigger.io | MongoDB | Mysql
